**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

Claim 25 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949).

In the present instance, claim 25 recites the broad recitation "a piston engine", and the claim also recites "in particular an axial piston engine" which is the narrower statement of the range/limitation.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11, 13, and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Adler (5072655).

Adler discloses a tubular piston (1) for a piston engine, which piston has a peripheral wall and a central pin (6), which peripheral wall includes a formed-in portion (8) which is directed against the superfcies of the pin, wherein the formed-in portion contains a thickened portion of material and is in alignment, at its outer periphery, with the remainder of the region of the superfcies of the piston, and wherein lateral surfaces of the thickened portion of material extend in an outwardly convergent manner (Fig. 4).

Claims 20, 21, 26, and 27 are rejected under 35 U.S.C. 102(b) as being anticipated by Fukushima et al (6038960).

Fukushima et al disclose a tubular piston which is closed at its front end by an end wall and has a joint part at its rear end, wherein the cavity is open towards the outside through at least two ducts (52, 71) having apertures that are disposed in the rear end region of the tubular piston, and wherein the ducts are distributed over the periphery of the tubular piston, wherein the duct(s) extends rearwardly and concurrently obliquely towards the outside (Figs. 16 & 17). Wherin each of the ducts open onto the outer superfcies of the tubular piston.

***Allowable Subject Matter***

Claims 1, 5-10, 14-19, 24, and 28 are allowed.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL LESLIE whose telephone number is (571)272-4819. The examiner can normally be reached on M-F 8:00am - 4:30pm.
